

GAAM's petrol pumpset ideal as portable unit

The petrol powered GAAM **MK4QF Quick-Fill pumpset** has been engineered and developed for high volume applications.

This 70 kilogram pumpset is easily handled by two firefighters for onsite positioning, making it ideal as a portable pump for dewatering or supply applications.

Designed to give dependable performance, the MK4QF pumpset features an aluminium alloy pump casing, a stainless steel shaft and a bronze hydraulically balanced impeller.

The pumpset can be customised to suit individual needs with a variety of optional extras, including electric priming system and automatic or manual foam systems. It can also have a fixed or remote instrument panel with a range of instruments and controls available for each.

The pumpset generates pressures to 500 kPa and flow rates to 1100 l/min. With mechanical seal, replaceable bronze wear rings, and multi-position discharge, the pumpset's reliability and durability are assured.

The MK4QF Quick-Fill pump can also be fitted to a diesel engine.
