

GAAM's diesel pumps offer tailored solutions for firefighters

GAAM Emergency Products' diesel pumps are meticulously designed to offer firefighters an array of features as well as a specific solution for every type of emergency situation.

GAAM's **MK500 diesel powered pump** has been designed to pump considerable volumes of water, making it ideal for large fire applications.

Its mid range provides an impressive 2200 l/min at 700 kPa while the higher volume pumps 2800 l/min at 500 kPa and the lower volume pumps 1000 l/min at 1000 kPa.

This versatile pump can be used in urban, industrial and rural environments and features an aluminium alloy pump casing, a stainless steel shaft and a bronze hydraulically balanced impeller.

The pump can be tailored to suit individual needs with a variety of optional extras, including soft suction and discharge manifolds, foam systems, tank by-passes and relief valve mountings.

GAAM's **MK70** is a rugged, high performance pump intended for utility firefighting applications. The pump's lightweight design makes it ideal for mounting onto a vehicle or trailer with a small tank.

The pump provides pressure up to 720 kPa and flow rates to 850 l/min. With bronze impellers, mechanical seal, replaceable bronze wear rings, four-position discharge and lightweight aluminium alloy body, the pump's quality and durability are assured.
